Tabula Global High Yield Credit UCITS Fund, a Sub-Fund of Tabula ICAV (ISIN: IE000SMPFN93) (the “Sub-Fund”)

Class B | Ordinary Class | Accumulating |

Investment Manager: Tabula Investment Management Ltd.

Management Company: KBA Consulting Management Limited

Objectives and investment policy

The Sub-Fund is actively managed and will seek to generate returns that, over time, exceed that of the ICE BofA Global High Yield Constrained Index USD Hedged (the “Benchmark”). The Sub-Fund intends to achieve its investment objective by employing a “top-down” approach, investing in a combination of standardised, liquid instruments linked to government debt, interest rate markets and diversified portfolios of corporate debt, as further detailed in the section below titled “Investment Strategy”.

As part of the investment process, the Team will calculate and track key “macro risk factors” of the Benchmark on an ongoing basis, with a view to maintaining an overall macro risk profile similar to that of the Benchmark. The Team achieves this by calculating key statistics of individual securities in the Benchmark (such as modified duration, option adjusted spread and optionality risk exposure) and aggregating these across the entire portfolio of bonds in order to explain the market risk of the overall Benchmark, as detailed above.

- credit default swap indices and index options ; total return swaps and options that reference one of the eligible corporate debt indices; - exchange traded futures and options referencing corporate debt indices; - Government bonds with investment-grade ratings issued by the United States of America, the United Kingdom of Great Britain and Northern Ireland,

or countries that are current or former members of the European Union or European Free Trade Association (collectively the “Eligible Governments”); - exchange-traded futures and options referencing government bonds issued by one of the Eligible Governments; - interest rate futures, swaps and swaptions, including fixed-for-floating interest rate swaps, swaptions and exchange-traded money market futures linked to the US Dollar, Euro and Sterling interest rate markets; and - Eligible Collective Investment Schemes, including exchange-traded funds, that primarily invest in high yield corporate debt. More information on the assets can be found in the fund documentation.

- The Share Class of the Sub-Fund will accumulate income in their value.
- This Sub-Fund may not be appropriate for short-term investment.
- The Share Class is denominated in GBP, the Sub-Fund’s base currency is USD.
- Shareholders may subscribe/redeem units at the appropriate NAV per share provided an order request is received by the ICAV by the trade cut-off time 4.30pm (London time). Orders will be dealt with the following dealing day. Subscriptions/redemptions must meet the minimum amounts as set out in the supplement of the Sub-Fund.

This indicator is based on historical data and may not be a reliable indication of the future risk and reward profile of the Share Class.

The risk category shown is not guaranteed and may shift over time.

The lowest category (Category 1) does not mean ‘risk free’.

The Share Class is rated 4 due to the nature of its investments and the frequency of price movement which include the following risks which may impact the value of the Share Class or expose it to losses.

- No capital protection: The value of your investment may go down as well as up and you may not get back the amount you invested.
- Market risk: The Sub-Fund is primarily exposed to long and short credit risk. Returns will decrease if there is a default, or higher perceived risk of default, among the entities referenced by the CDS indices, or a write-down (“bail in”) of an entity’s debt by financial authorities. The Sub-Fund may also be impacted by other factors affecting the value of debt securities issued by those entities, including changes in interest rates and exchange rates. When buying and selling CDS on subordinate debt, such debt may be subordinate to senior debt.

- Risk of financial derivatives and techniques: The Sub-Fund invests in financial derivative instruments to gain both long and short market exposure to the underlying market with rebalancing on a monthly basis. The performance of the Sub-Fund over periods longer than one month may not be inversely proportional or symmetrical with the returns of the reverse positions in the underlying instruments.

- Foreign exchange risk: The Sub-fund invests in EUR and USD denominated assets and does not provide a hedge to currency exposure in the base class. Strengthening or weakening of currencies may impact performance.

- Leverage: The Sub-Fund may use leverage, so losses may be magnified.

- Liquidity risk: Lower liquidity means there are insufficient buyers or sellers to allow the Sub-Fund to sell or buy investments readily. Neither the Index provider nor the issuer make any representation or forecast on the liquidity of CDS transactions.

- Counterparty risk: The Sub-Fund may incur losses if any institution providing services such as safekeeping of assets or acting as a derivatives counterparty becomes insolvent.

- Credit Risk: The issuer of a financial asset held within the Fund may not pay income or repay capital to the Sub-Fund when due.

For more information on the risks to the Sub-Fund, please see the supplement for the Sub-Fund and the prospectus of Tabula ICAV, available on the product pages of TabulaCap.com.
